

First we made a light
light up. First you have to
get a battery, a wire, and
a light bulb. Then you
wrap the wire around
the light bulb and put
one end on the battery
and it will light up.

To make it brighter you
take two batteries and
stack them putting the
positive side of the
battery on the negative
side of the other battery.
Then take the light, wrap
the wire around it and
put it on top of the
batteries and it's brighter.
