

You should read the relevant chapters each week both before and the material is discussed in class. You should also look at the worked problems included in the lecture slides and also select and work some end of chapter problems from the book. There are three practice exams posted for each of the exams and these should be worked prior to the exam and at least one taken as a real practice exam. The lectures will probably stay a little ahead of the schedule given below.

There will be no lectures on January 15th and March 12 – March 16.
